

Circular knitting technology

Terrot, Chemnitz (D), has provided new designs of its machines. One innovation presented is a six-colour hoop device in the S6F348 combined with up to four needle tracks in three-way technology. Also new are the electronic controller and the quick change of wide and tube rolling in the S296-1 Open Width. For the mattress sector, the UCC572 M, now with 90 thread guides, has been developed, which should permit a production increase of up to 50% or 25 kg/hour.
